WHAT WE HAVE DONE FOR OTHERS. *Imagine what we can do for you.*

FILLING IN UPGRADE GAPS

Challenge

A company was running behind on a critical SAP upgrade project.

Solution

The client needed a small team to come in and complete a series of challenging tasks not yet allocated to internal staff.

Details

STEP UP came in to design and develop solutions in the output area, leveraging Adobe Interactive Forms. They also completed a complex conversion which was core to the upgrade. The project got back on track and the deadline was met.

TRAINING USERS AND STAFF ON NEW TECHNOLOGY, AS WELL AS FINALIZING IMPLEMENTATION

Challenge

A client recently went live with SAP. Faced with users new to the system and an IT support team new to SAP software, the company needed help educating users and employees, along with completing work.

Solution

STEP UP was brought in to fill open IT positions with senior-level resources to both get work done and mentor the client's staff.

Details

Our team worked closely with the organization to fix and improve existing programs such as International Taxation. In addition, we educated and trained end users and the IT staff. We began by completing some processes that weren't fully implemented by the client's integration partner. Next, we worked through the open items list that occur during a major rollout.

GETTING A BUSINESS BACK ON TRACK

Challenge

A key employee leaves without transition, putting business operations at risk.

Solution

STEP UP jumps in when a key employee leaves without knowledge transfer and detailed documentation.

Details

When an essential technology employee left his mid-sized company, he left the IT department in a lurch. With little documentation of what was implemented, day to day operations became difficult. STEP UP came in and temporarily took over. We began by quickly assessing the situation and doing triage. Next, we began clean-up, stabilization and ultimately, documentation and knowledge transfer.

We were able to quickly uncover the issues, salvage what we could and correct areas that needed improvement while instituting best practices throughout. We concluded the project with thorough documentation, so our client was able to resume ongoing technical maintenance and support.

BUILDING A FINANCIAL SYSTEM

Challenge

A Fortune 500 company was looking to centralize credit and debit processing.

Solution

STEP UP built a central transaction system that enabled the company to save time and improve workflow.

Details

Our team partnered closely with the client to build a central transaction processing system which consolidated the workflow into a single screen to manage millions of dollars in credits and debits. We worked closely with the organization's business users and systems analysts to recommend, design, implement and code the system.
